

This page will guide you on how to use Git and GitHub to clone the exam repository to your computer. The repository you will clone has a skeleton of how the exam solution should be structured.

Getting the Repository for the Midterm

Follow the next steps to get the repository for Midterm Read all of the steps before beginning.

1. Follow [this link](#) to get the repository for Midterm
 1. When you click on the link, you will be asked to login with your GitHub account.
 2. Then you will be asked to accept the assignment. When you do, GitHub will start cloning the project repository to your account.
 3. After the cloning is finished, you will get a link to your assignment. Follow that link.
 4. Lastly, click on the green button `Clone or download` and copy the URL to the repository.
2. Use the URL to clone the repository to your computer:

```
cd ~/Exams/  
git clone URL
```

bash

This tells git to go to the Exams page, and clone (copy) all its contents to your folder. It will create a new folder with the project name, in this case Midterm, and download all the files to that folder.

Now, if you [list files \(ls\)](#) in your directory:

```
ls
```

You should see a new folder for the Midterm. Change the directory to that folder:

```
cd MidtermFolder/
```

The Midterm folder contains the exam `.pdf` file with the questions to be answered by you, and it also contains a skeleton of how you should organize the solution of your project.

After you complete the project remember to push your commits back to your remote repository before the deadline.
